

PRODUCT DATA SHEET

DP 10

Description - DP10 is a filler ingredient, obtained by selection and processing of power station by-products resulting from the combustion of pulverized bituminous coal. DP 10 is subjected to strict quality control.

General Information

Presentation	Coarse light weight powder
Colour	Dark grey
Bulk Weight	Approx. 0.95 metric ton per cubic meter
Particle size	In a range of 60% to 85% retained on 45 microns
Package	Bulker / Open Trucks / 30kg bags

Recommended uses

Precast Blocks
Sand Replacement in Concrete/Mortar
Precast Elements
Fly ash bricks

Recommended dosages

DP 10 can be used in combination with natural sand or crushed sand. It also contributes to strength partly by pozzolanic action. It has excellent demoulding characteristics as compared to normal mix. Typically, DP 10 can be used up to 30% in precast concrete blocks/elements. It can replace up to 20% of the sand in concrete/mortar.
